

Wings Plus Municipal Tax automates municipal-tax preparation by producing returns for more than 6,300 city and county municipalities/fire districts. With almost double the coverage of our nearest competitor, Municipal Tax produces returns for more than 6,300 city and county municipalities/fire districts. By including municipal processing for Missouri and New York Fire taxes (along with every state covered by competitive applications), Wings Plus Municipal Tax gives tax-preparation professionals access to the most comprehensive data set and the most powerful processing capabilities available.

## HOLD YOUR BREATH

Breadth of coverage is just one element to consider in evaluating the comprehensiveness of municipal tax capabilities. By helping insurers eliminate the time and expense of data redundancy – and reducing the opportunity for processing errors – Wings Municipal Tax helps contain costs and improve overall preparation processes in numerous ways.

Wings Plus Municipal Tax can write and read Excel natively, enabling you to search, sort, aggregate, format, and extract municipal-tax data for consumption by any other software system or management report. To eliminate paper, Wings Plus applies dry signatures in electronic format to thousands of municipal returns. It prints check requisitions for each tax return or can be used to upload data into your account payable system and/or check-writing software.

## CALCULATE THE DEPTH

In conjunction with the use of the Wings Plus Risk Location feature (legislative requirements like Kentucky's House Bill Section 524 mandate the use of risk location technology by insurance companies for proper jurisdictional tax reporting), Municipal Tax ensures accurate reporting and automates municipal tax processing which reduces staff time and work. Municipal Tax also may be used with data generated from other tax identification applications with proper formatting. Municipal Tax data will automatically populate to Wings Plus Premium Tax for states such as Florida, Louisiana, and South Carolina, as applicable. Since the data resides in the same database, data changes made and saved to MunicipalTax will dynamically flow to Premium Tax forms. Competitive edge? Yes, that's accurate.
