

WINGSPLUS: WINGSLINK LIVE

Want real-time access to your annual and quarterly statement data anytime, anywhere, and in any way possible? How about getting the most current, live information each time you refresh your **Microsoft Excel** worksheet? Or even having your Gain/Loss information automatically synchronize with your worksheet without ever pressing a button? We have a data-mining tool that ensures data integrity, provides critical, time-saving functionality, and will do all of this for you. Actually, it's like two products for the price of one. *Interested?*

EXCEL ADD-IN

On one hand, the **WingsPlus: WingsLink Live** is an Excel add-in tool you can use to access and change your live statement data remotely and dynamically straight from your spreadsheets. With **Microsoft Excel** as your interface, you can create custom reports “on the fly” with up-to-the-minute statement information.

WINGS DATA CONNECTOR

On the other hand, the **WingsPlus: WingsLink Live** includes a service called the **Wings Data Connector**. With this service, you can set up an endless number of custom processes that read and instantly update your annual and quarterly statement data. Endless possibilities can include creating a custom, automatic reconciliation between your General Ledger and your annual statement, or setting up an automatic feed of your annual statement data into your own custom report generation.

With **WingsPlus: WingsLink Live**, you get to analyze accurate data the first time instead of having to check it over.
